Dhaka
2019- present

Junior School Certificate

Secondary School Certificate

Higher Secondary School Certificate

B.Sc in Computer Science

PERSONAL PROJECTS

Texify

(<https://github.com/arnobm97/texify>)

A python-based program to find out characters from texts
using Machine Learning. It uses Tesseract OCR engine to train
and test input data.

Rocket Launch

(https://github.com/arnobm97/Rocket_Launch)

This is an OpenGL project using GLUT. By using the C++
language, I created a rocket and made that flying into the sky.
This was a project for my course Computer Graphics.

ideable

(<https://github.com/arnobm97/ideableNew>)

An online platform for getting investments in new ideas. Both
investors and inventors can create accounts here. Inventors
post about their ideas and investors invest in them if they find
them interesting. This is my final year project and I'm still
working on it. I am using basic web development languages like
PHP, JS and CSS, HTML to build this project.
